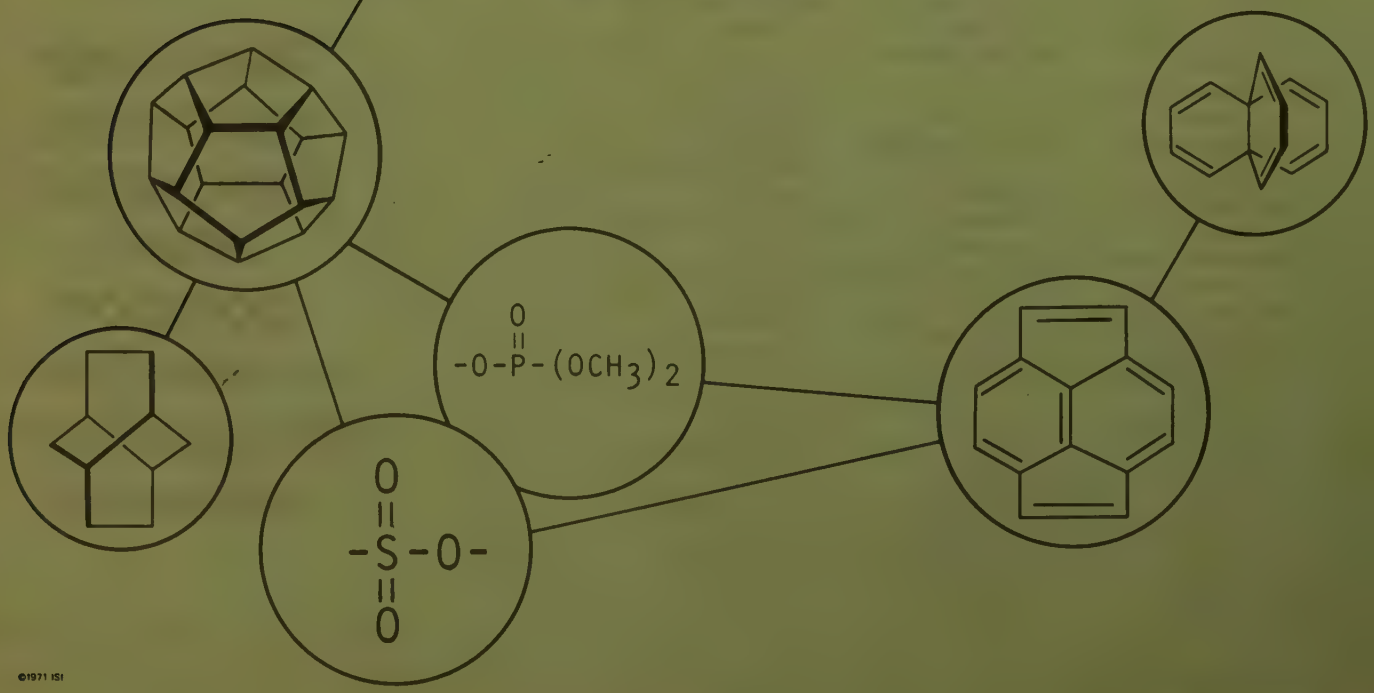
"Current Contents® not only gives you more time to do your thing... but it helps you do it better."

Therefore

"Next week you'll know more about what's going on in your field than you knew last week."

Find new compounds important to your research. Prevent needless duplication of compound synthesis. Reduce literature search time from days to minutes. With the Chemical Substructure Index™ (CSI™).

NOW, SEARCH FOR NEW COMPOUNDS BY CHEMICAL SUBSTRUCTURE



CSI lets you conduct fast, efficient manual searches for new chemical compounds containing specific substructures or fragments. It's the only chemical information retrieval system that gives you this capability because it describes compounds by the most effective means available, the Wiswesser Line Notation (WLN).

Unlike molecular formulas, chemical nomenclature, or fragmentation codes, WLN represents each molecular structure with a unique, unambiguous, alphanumeric descriptor. So there is no chance of missing important compounds because of nomenclature deficiencies.

Chemical Substructure Index is permuted, too. For each compound, a separate entry is created for every significant substructure it contains. So you can easily employ manual search strategies that are as sophisticated as those usually reserved for computer searches.

Find out how **CSI** can help you keep up with over 150,000 new compounds each year, quicker and more effectively than ever before. Send for our new brochure.

INDEX CHEMICUS

SUBJECT INDEX

ABSTRACTS 171,533 TO 185,339

The Subject Index contains 37,618 entries. All indexing is selectively performed by chemists. The analysis is not limited to article titles. Uses of chemical compounds are identified, including those potential applications suggested by authors. Generic and specific chemical descriptors are also noted.

This Index was prepared and printed on a high speed computer. As the computer print mechanism contains a limited number of special symbols, it is necessary to spell out Greek letters except in the case of $\alpha, \beta, \gamma, \delta, \epsilon$, and ω which are represented by A, B, G, D, E and W respectively.

The format and punctuation conventions are essentially the same as in the Molecular Formula Index except that there are no hyphens listed, since articles rather than compounds are the units indexed.

OATS®
HOT-LINE

DIAL THIS NUMBER
for immediate tear sheet service

Now . . . you can request *OATS** service around the clock, using our new *OATS HOT LINE*. Dial direct anytime, day or night. Monday through Saturday, from 8:30 A.M. to 10 P.M. EDST, *ISI* personnel are normally on duty—at other times your *OATS* request will be taken by our answering service and your order will be processed immediately the following morning. Within hours after your call is received, the article you need is on its way to you, torn right from the original source journal.

The cost of *OATS* is $2.00 for articles up to 10 pages, plus $2.00 for each additional 10 pages or portion thereof. There is a 50¢ service charge for each article. *HOT LINE* request, air mail or special delivery cost an additional 50¢ each per article. You can pay for *OATS* service either by check or by purchasing convenient *ISI* stamps in denominations of $2.00 and 50¢ in units of $10.00.

Note: Government procurement regulations permit information services to be charged directly to grants or contracts awarded by NSF, DHEW, NASA, DoD, AEC, etc. If more specific information is needed, contact your Contracting Office. For example, NIH grantees should refer to PHS Publication No. 1301, p. 13; for NSF refer to NSF 63-27, p. 10.

ISI® announces MATCHING GRANTS to help chemical libraries acquire the comprehensive Science Citation Index®

Now, for the first time, smaller university and medical libraries can enjoy the same multidisciplinary information services that hundreds of the world's largest educational and research organizations subscribe to.

The Grants

To help libraries previously unable to afford these services, the Institute for Scientific Information is providing dollar-for-dollar matching grants toward the cost of all or parts of the comprehensive Science Citation Index. The grants apply to past, present and future editions and provide 50% of the cost.

SCI® Services

SCI indexes all material published in the world's 2,500 most important journals covering the mathematical, life, physical, chemical, behavioral and engineering sciences. It comprises four special indexes, each issued quarterly and cumulated annually.

1. **Citation Index** lists, by author, all cited papers, naming citing authors and journals in which published.
2. **Corporate Index** lists published material by organization and staff member.
3. **Source Index,** organized by author, gives complete bibliographic descriptions of material listed in the Citation and Corporate Indexes and serves as an author index to the current literature.
4. **Permuterm® Subject Index** lists permuted pairs of key terms in titles and subtitles, identifying the author who used them [for cross-reference to the Source Index]

Eligibility

The following are invited to apply for the ISI Grant: Two and four-year colleges limited to undergraduate or small graduate programs. Departmental libraries in universities already subscribing to the SCI services. Hospitals of 600 beds or fewer not affiliated with a medical school, and hospitals affiliated with a medical school already receiving SCI.

For more information on the SCI services and/or how you can obtain your matching grant application form, write to Mr. Melvin Weinstock, SCI Grant Program.

AUTHOR INDEX

ABSTRACTS 171,533 TO 185,339

The Author Index contains 38,006 entries. The format and punctuation conventions are essentially the same as in the Molecular Formula Index except that there are no hyphens listed, since articles rather than compounds are the units indexed. In the Author Index, commas indicate omission of the first three digits of the abstract number. For instance BIRR C, 172297, 298/180375 (line 20, column 17) indicates that C. BIRR is the author of articles 172297, 172298 and 180375. Under each author, article numbers are arranged in increasing numerical order.

Readers are cautioned to check the alternate spellings of names, especially the various ways in which Russian and Chinese names may be spelled due to the several transliteration conventions.
